Water heaters
with electronic control.

Most important advantages

Electronic control

- energy and water savings through smooth power modulation
- maintaining a constant water temperature of 52°C
- water temperature regulation directly in the faucet by mixing in cold water.

4 power levels in one water heater

- option to select maximum power (except for 27 kW model)

Possibility of reheating preheated water

- Water temperature up to 60°C on the supply

Easy replacement of the old heater with a new one

- specially designed PPE4 housing equipped with a unique hanger allows for easy installation of the heater in the place of the old one.

Applications

from 10kW

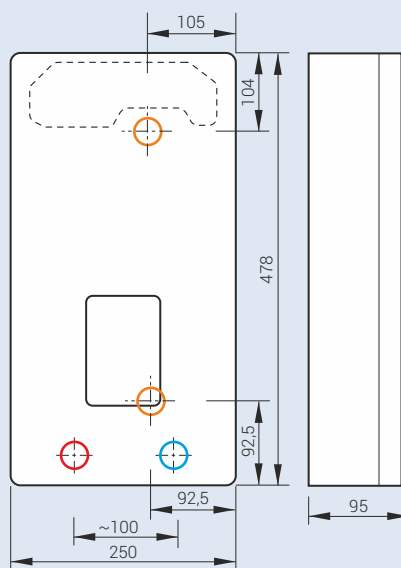

from 12kW

from 18kW

Dimensions

The special hanger facilitates the installation of PPE4 in the place of the old heater of any brand.

inlet and outlet section G 1/2"

● cold water inlet

● hot water inlet

● electric cable connection point
